

# DP3000

## BANKNOTE COUNTER AND DETECTOR

The **counter detector DP3000** is the perfect solution for a fast and reliable control and counting of banknotes. Compact, with an elegant design its main function is to verify and count all banknotes denominations. It is able to: **count, check, verify of a huge amount of banknotes** stuck in the relative hopper.

Easy and intuitive: it will be enough to put the banknotes in the top hopper and an automatic start will count and verify all of them with several checks: magnetic control (magnetic wire and magnetic ink), infrared control, UV control, dimension and thickness of the banknotes. In case of a suspected banknote the machine will reject the banknote by putting out 3 bips and it will be shown on the display the error code.

The detector is **100% certified by the European Central Bank**.

### SETTING:

<b>AUTO</b>	Automatic counting
